

21st Century Mini Sprinter

Why are arborists flocking to the new 21st Century Mini Sprinter?

There are a host of reasons. Because the Sprinter incorporates all of the latest technology, it can do as many or more applications per day than the largest sprayers, but with a much smaller initial investment and lower operating cost. (Think 20 mpg!) Plus, it is more maneuverable, drives almost like a car, has great marketing potential and more storage than you can imagine.

400G Application/Nurse tank,
(1) 56G and (1) 35G mix/application tanks.

All operations are on curbside, including fill.

Njekt Soil Injection Systems can be installed to increase the efficiency, flexibility and profitability.

The 20 or 35 gpm pumps are driven by high amperage output engines for enhanced charging.

Electrical Systems are easy to use, easy to trouble shoot, and a smart isolator protects the truck's charging system.

Additional great features are: easy to learn and use controls; and elements like the sink, storage and hand wash area.

For more information, consult the Operations Manual provided with the truck and view our YouTube videos. Green Pro Solutions also welcomes your phone calls regarding operation, trouble shooting, or to provide tips and tricks or maximizing the capabilities designed into these spray systems. For additional options, contact your GPS representative.

Also note that this Sprinter and all Green Pro equipment is designed by your fellow industry spray technicians.

We encourage your feedback on how we can improve the operation and user experience for you, the ultimate authority on Green Pro sprayer performance.

"This is very different than my previous experience with much larger spray rigs. It is so much more efficient. From fill-up in the morning to using the Njekt for small targeted applications, quickly mixing products and seamlessly moving from application to application, I would have a hard time coming up with recommendations to improve the Sprinter. It's even set up to fill backpacks. It certainly meets my expectations."
