

21st Century Sprinter

Why are arborists flocking to the 21st Century Sprinter?

There are a host of reasons. Because the Sprinter incorporates all of the latest technology, it can do as many or more applications per day than the largest sprayers, but with a much smaller initial investment and lower operating cost. (Think 20 mpg!) Plus, it is more maneuverable, drives almost like a car, has great marketing potential and more storage than you can imagine.

400G Application/Nurse tank and (2) 56G mix/application tanks. Other tank options available.

All operations at rear or curbside, including fill.

Electrical Systems are easy to use, easy to trouble shoot, and will not drain the truck's charging system.

20 or 36 gpm pumps are driven by gas or high performing, low maintenance diesel engines.

Njekt Soil Injection Systems can be installed to increase the efficiency, flexibility and profitability.

Additional great features are: easy to learn and use controls; the sink, storage and hand wash area.

Operations Manual and 1 year limited warranty provided with purchase of a new truck.

"Our new Plant Health Care Program got off to an amazing start with our new Sprinter. It is the perfect spray rig for 21st Century PHC and advanced nutritional products. The advanced Sprinter Spray System attracts quality employees, and coupled with the Njekt System, is extremely profitable and well worth the cost.

There is a load of storage space, enough to do liquid and granular applications - trees and turf."
